

Department of Chemistry
Indian Institute of Technology Delhi

From the Editorial Team

Beginning of a new journey or retrieving an old one!!! No matter what, life is a journey with every day bringing new hopes, dreams and challenges. We try to reinvent ourselves while passing through the moments of different tastes. Rediscovering Chemcos was a similar one. Undoubtedly, the tireless efforts by team members made this all possible. And then, a general question arises: why do we need Chemcos? It provides a platform to share our scientific progress, to come out of the box, and show our literary talents. It gives us a chance to improve our writing skills.

In this issue we tried to incorporate scientific awareness of our researchers and different colors of our department. The cover story has a description about crystallography as we are celebrating 2014 as an international year of crystallography. Scientific verses have information about the use of Zeolites in petrochemical industry, the development of the first nano computer, and about singlet states in solution NMR. News article has information on the conversion of carbon dioxide to a liquid fuel. In personalities, we are privileged to present an interview with Dr. Peter Goelitz, Editor-in-chief of *Angewandte Chemie*. The feedback stories of M. Tech. and M. Sc. batches and a few poems are also the part of this issue.

This is our humble effort to re-launch Chemcos while many more issues are awaited. Kudos to the Chemcos team!!!
